Minimallyinvasivespinesurgerycom Dr Frank Phillips

minimally invasive spine surgery Minimally Invasive Spine Surgery (MISS) is the latest advanced technology available to perform spinal surgeries through small, less than one inch long, incisions. It involves the use of special surgical instruments, devices and advanced imaging techniques to visualize and perform the surgery through such small incisions.

Articles UnderstandSpineSurgerycom

The comparison between minimally invasive and open surgery can be made when describing a lumbar fusion. This procedure typically has the patient lying face down during the surgery, with the work done on the back side (posterior). With an open case, the incision is usually in the midline and the muscles are spread to the sides by retractors.

Minimally Invasive Spine Surgery, Spine Restoration, MIS TLIF

Minimally Invasive Surgery â€œ Transforaminal Lumbar Interbody Fusion (MIS

TLIF) is a surgical procedure used to replace degenerative discs, restoring the natural alignment of the spine. Disc degeneration is a complex and irreversible process.
